Micki,

If you are at all serious about seeking public comment regarding the build-out of windpower throughout the hilly regions of New England you will honor Walt Cudnohufsky's request that you extend the deadline for comment to October 1. Windpower means virtually NO POWER in exchange for vast local environmental destruction and health threats to humans living miles around the wind turbines. This is a mad idea driven by a misguided conception of the causes for climate change, which is never mitigated by windpower, and the continual lobbying of vested interests in windpower development.
