

NESCOE Request For Information– *Supplemental Information Form*

Due: Close of business on Friday February 25, 2011

In responding to the Request for Information (“RFI”) issued by the New England States Committee on Electricity (“NESCOE”), this optional *Supplemental Information Form* can be used to provide (a) supplemental information on specific renewable generation projects for which a *Core Information Spreadsheet* has been submitted and/or (b) information on potential transmission projects that could facilitate the integration of new renewable generation projects. Please see the *Guidance to Respondents* memorandum for additional information on the RFI and this form.

Respondent Information:

Respondent Name: _____

Contact information: _____

 Name: _____

 Title (optional): _____

 Alternate contact (optional): _____

Mailing Address: _____

 Street (line 1): _____

 Street (line 2): _____

City / Town: _____

State / Province: _____

Postal Code: _____

Country: _____

Email addresses: _____

 Primary: _____

 Alternate: _____

Daytime phone numbers: _____

 Primary: _____

 Alternate: _____

Project Identification:

If this *Supplemental Information Form* is being submitted as a supplement to a *Core Information Spreadsheet* containing information on a specific renewable generation project, please indicate below, under Option A, the renewable generation project that is associated with this *Supplemental Information Form*. (Option A could also be selected by a transmission owner or developer submitting a transmission project that would be associated with specific renewable generation projects.)

Option B should be selected for responses that are not associated with specific *Core Information Spreadsheets*.

NESCOE Request For Information- *Supplemental Information Form*

Due: Close of business on Friday February 25, 2011

For both options, this form indicates categories of additional information that NESCOE believes would be particularly useful. Respondents should feel free to provide other types of information, in addition to information in the “priority categories” listed below.

NESCOE Request For Information– *Supplemental Information Form*

Due: Close of business on Friday February 25, 2011

Please check one box below:

- Option A: This *Supplemental Information Form* is being submitted in conjunction with one or more *Core Information Spreadsheets*.
- (Below, please indicate the associated *Core Information Spreadsheets*, preferably by the project identifier of the associated generation projects.)

- Option B: This *Supplemental Information Form* is not being submitted in conjunction with one or more *Core Information Spreadsheets*, but contains information on transmission projects that may potentially facilitate the integration of new renewable generation projects.

NESCOE Request For Information– *Supplemental Information Form*

Due: Close of business on Friday February 25, 2011

Supplemental Information – Priority Categories:

Supplemental Information for a specific renewable generation project:

Respondents submitting a specific renewable generation project by completing a *Core Information Spreadsheet* are encouraged, but not required, to provide supplemental information on that project by submitting an accompanying *Supplemental Information Form*. For such forms, NESCOE is particularly interested in receiving information in the following categories:

Interconnection / transmission-related information:

Part of the RFI process may include efforts to identify logical “clusters” of renewable energy sources that could benefit from a coordinated renewable procurement process. As transmission-related issues may be important to such projects, NESCOE would appreciate receiving interconnection and transmission-related information regarding proposed renewable generation projects. Examples of such information would include:

- For projects located in New England, indication of whether an interconnection request has been submitted to ISO-NE, and if so, whether a queue position has been assigned (and confirmation of the queue position);
- For projects located outside of New England (and to the extent known), indication of what transmission facilities, if any, might need to be developed (both within and outside New England) to reliably deliver the renewable energy output of those projects to New England loads; and
- Additional details on anticipated / potential interconnection points, voltages, etc.

Information on contemplated generation technology:

- Any information regarding the anticipated generation profile of an intermittent renewable resource (*e.g.*, anticipated time-varying output from a wind project); and
- Additional information on any storage capability that would be developed in conjunction with the project.

NESCOE Request For Information– *Supplemental Information Form*

Due: Close of business on Friday February 25, 2011

Supplemental Information for transmission projects

As noted in the *Guidance to Respondents*, transmission owners and developers are encouraged to submit *Supplemental Information Forms* for transmission projects that may facilitate the delivery of energy from renewable generation projects to New England loads. Such “transmission specific” responses can either (i) be linked to specific generation projects (including projects for which a *Core Information Spreadsheet* has been submitted) or (ii) be proposed as “stand alone” transmission augmentations that would facilitate energy delivery from generic or unspecified renewable energy projects.

For *Supplemental Information Forms* associated with potential transmission projects, NESCOE would be interested in receiving non-confidential information about the renewable energy sources whose integration with the New England bulk power supply system would be facilitated by the project, and any technical information on the transmission upgrades. Examples of such information include:

- If applicable, an indication of the renewable generation projects whose energy output would be more readily deliverable to New England loads;
- Potential interconnection points, voltages, technology (e.g., AC vs. DC);
- Potential schedule for placing the project into commercial operation; and
- Other non-confidential information that may help NESCOE evaluate the information received in the RFI.

Respondents are encouraged to submit the supplemental information in whatever electronic format may be appropriate.
